

SYT PLUS

SYT PLUS

*A practical, versatile
dentistry training simulator
that adapts to any treatment solution.*

SYTPLUS

Dentistry training simulator

The **SYTPLUS** simulation unit has been designed to let students experience working conditions that closely resemble reality, thus aiding and enhancing their technical training and tutoring them with regard to correct working ergonomics.

The use of advanced technology and top-quality materials make **SYTPLUS** a highly reliable yet easy-to-use dental simulator, particularly suitable for intensive use.

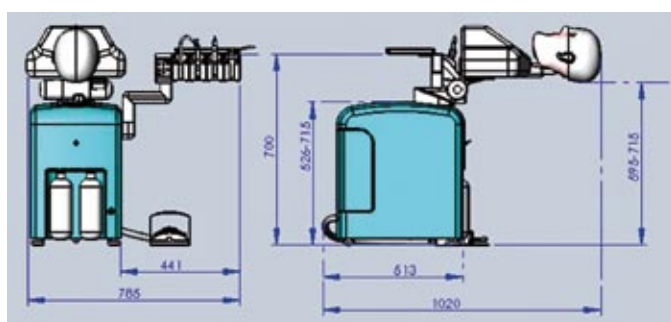

Handpiece holder with tray holder tray module featuring extensive excursion, able to simulate all working positions from 9 o'clock to 1 o'clock, thus providing a vast array of operating set-ups. The handpiece holder comes complete with 2 Midwest kits and 1 syringe.

Extensive excursion of the phantom, which can be adjusted both height and tilt-wise (over 70°) up to simulation of the Trendelenburg position. Features a 'home' position and two saved working positions. Movements are executed via the control panel and foot control.

Pneumatic suction cannula and suction waste collection tank. Spray water delivery is independent from the mains supply thanks to use of a dedicated tank integrated on the simulator.

The simulator can be used without having to make any modifications to existing systems but can, however, be connected to the mains water supply.
